START|neologisms

Well, the word anyway. Twenty years after William Gibson coined the term *cyberspace* in his novel *Neuromancer*, we live in a world of smart objects, always-on devices, and perpetually open information channels. The Internet feels less like an

alternate world that we "go to" and more like just another layer of life. Besides, doesn't *cyberspace* sound kind of played out? Clearly, we need a better word. The Institute for the Future asked a virtual roundtable of leading thinkers to coin a term for our new new reality. Here's what they came up with. - *Alex Soojung-Kim Pang and David Pescovitz*

William Gibson
Science Fiction Writer

If I had that word, it would be the title of my next book. I think *cyberspace* is past its sell-by, but the problem is that everything has become an aspect of, well, cyberspace.

Steve Jurvetson
Venture Capitalist

Augmented reality. In competition with virtual worlds and AIs, we will coevolve and internalize technologies to augment reality and our intelligence.

Vint Cerf
Internet Evangelist, Google

I still like [Xerox PARC researcher] Mark Weiser's term *ubiquitous computing*. It's a world in which the computer would melt into the walls and furniture.

Paul McFedries
Author, *Word Spy*

The combination of ubiquity and necessity makes the Net analogous to an atmosphere. I think the replacement word ought to be a play on that: *infosphere*.

Katy Börner
**Director, InfoVis Lab,
Indiana University**

A *global brain*, dominated by implants that merge biological creativity with digital resources and speed.

Neil Gershenfeld
**Director, MIT's Center
for Bits and Atoms**

I'd vote for calling it *the world*. Information technologies are finally growing up, so we can interact with them in our world instead of theirs.
