Open Call: Science Maps for Kids

The *Places & Spaces: Mapping Science* exhibit, at our academic partner Indiana University, has launched its 8th iteration with an open call for "science maps that kids aged 5-14 can use to gain a more holistic understanding and appreciation of science and technology." The selected maps are displayed in exhibits, published in print and online, and made available for purchase. This is a great opportunity to create and contribute maps that do two important things for young people: teach them about an aspect of science and interest them in mapping and visualization as a medium.

For consideration, submit your maps by January 10th, 2012. All the details can be found at: <http://scimaps.org/call/>

ic collaborations from 2005 to 2009
