SLIS Welcomes New Faculty Member: Ying Ding - Faculty News

My teaching philosophy is to teach students on how to learn in order to

make them to know how to think; to combine theory and practice together and use practice to better understand theory; to integrate teaching and research together to achieve joint benefits.

Dr. Ying Ding joined the SLIS Faculty on August 1, 2008 as an Assistant Professor of Information Science. She comes to SLIS from a position as a Senior Researcher (Unit Leader) in the Digital Enterprise Research Institute in the Department of Computer Science at the University of Innsbruck, Austria. Ding received her Ph.D. in Information Science in 2001 from the Information Studies Division, School of Computer Engineering, Nanyang Technological University, Singapore. She also has a Masters Information Science from the Graduate School of Chinese Academy of Sciences, Beijing, China that she received in 1996.

Institute of Information Scientists (IIS) - Celebrating 50 Years - Faculty News

Information Science as a professional discipline has some definable roots.

"2008 is the 50th Anniversary of the founding of the Institute of Information Scientists in the UK, and many of the ideas of the earlier information scientists are not only still valid today, but became the foundations upon which later generations have built. Consequently, feeling that it might be worth the effort to capture some insights into advances made in the last 50 years, a number of pre-eminent information scientists were commissioned to write articles on a range of topics reflecting many facets of information science." Virtual Reference Service Evaluation - Faculty News

"This study evaluates the level to which virtual (e-mail) reference services adhere to professional guidelines. These professional guidelines are set up as standards to assure service quality. However, studies of virtual reference effectiveness rarely utilize these standards to measure reference success. This study evaluates and compares the level of adherence to two sets of professional guidelines published by the International Federation of Library Associations (IFLA) and the American Library Association (ALA) Reference and User Services Association (RUSA). Analysis of 324 transactions from 54 libraries showed: 1) low levels of adherence to both sets of guidelines; 2) varied levels of adherence based on request types and user names on both sets of guidelines; 3) variation in institutional rank according to different sets of guidelines; 4) no correlation between user satisfaction and adherence to either set of guidelines. This study has implications for future research and practice because it provides a

systematic way to analyze transactions in light of the ideal professional standards. It also provides an empirical benchmark for evaluating virtual reference services." [Abstract]
